Front End Development Website Project

Question 1

Project Milestones

A) Web Site Topic

1. What is the purpose of the site?

The primary purpose of this website is to promote and facilitate the online presence of a local shoe shop named Shoe Station. It will list the many kinds of shoes, show the products that are available, and let consumers place orders or ask questions via a built-in form.

2. What do you want the web site to accomplish?

The website aims to inform customers about the shop's offerings, gather client orders and questions with an easy-to-use form, boost the company's internet visibility and assurance.

3. Who is your intended audience?

The intended audience consists of fashion-forward people searching for stylish yet reasonably priced shoes and parents buying shoes for their kids. Anyone looking for an easy and educational online shoe buying experience.

4.What opportunity, problem, or issue is your site addressed?

Many neighborhood shoe stores don't have an internet presence to draw in modern, knowledgeable about technology clients. By developing a responsive and visually attractive website that improves accessibility and client interaction, our project fills that gap.

5.What type of content might be included in your site?

The website will contain the following content:

- A welcoming homepage with branding and promotional content.
- A product listing page featuring a table of shoe types, categories, and prices.
- An order form for customers to make inquiries or place orders.
- Navigation and footer elements for consistent user experience.
- An animated logo/banner and contact links (including email).

B) Planning Analysis Sheet

1. Website Goal

To design a three-page website that collects feedback from customers, informs, and advertises a shoe store.

2. Describe the goal of your web site in one or two sentences.

The goal is to offer an advanced, mobile-friendly shoe store website with features for client orders, product listings, and simple navigation.

3. What results do I want to see?

A website that looks professional and has at least three useful pages, use of embedded and external CSS. A functional form that gathers fundamental client data, a well-organized interface that is visually consistent throughout all pages.

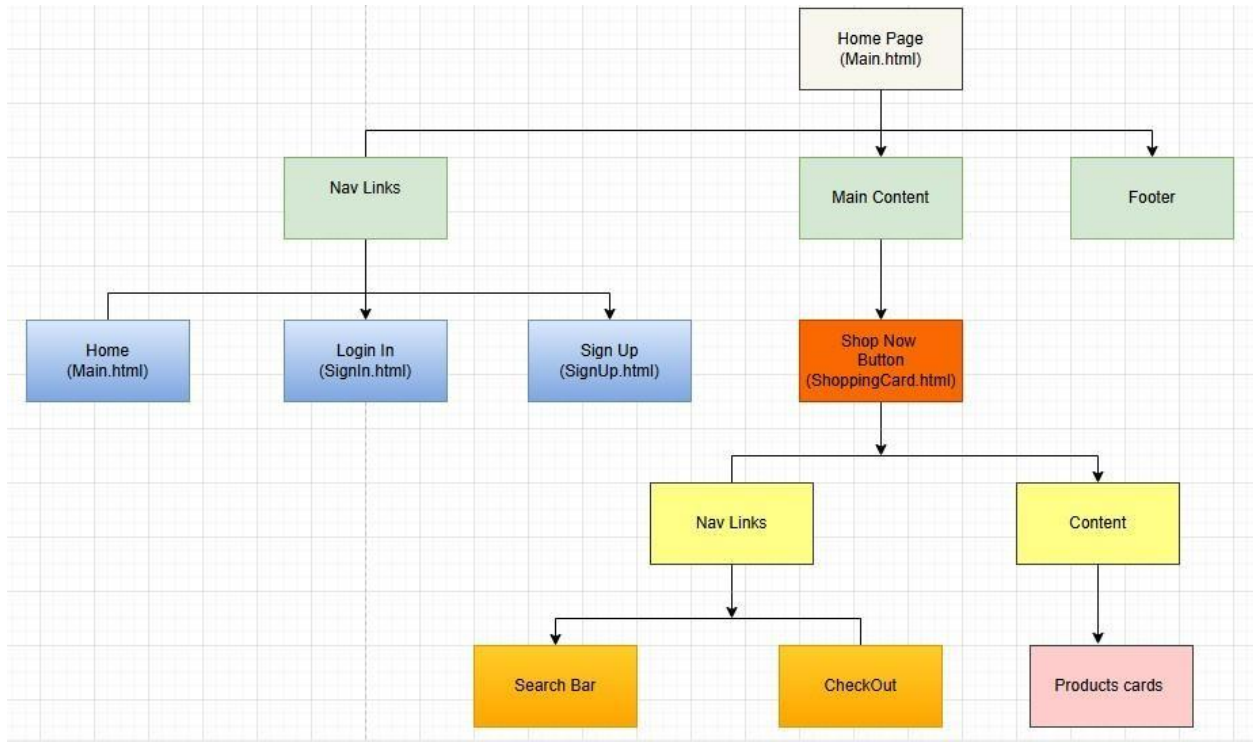

4. List the working title of each page on your web.

- Main.html – Home
- Signin.html – Sign-in
- signup.html – Sign-up
- ShoppingCards.html – Shopping Cards

5. What information do I need?

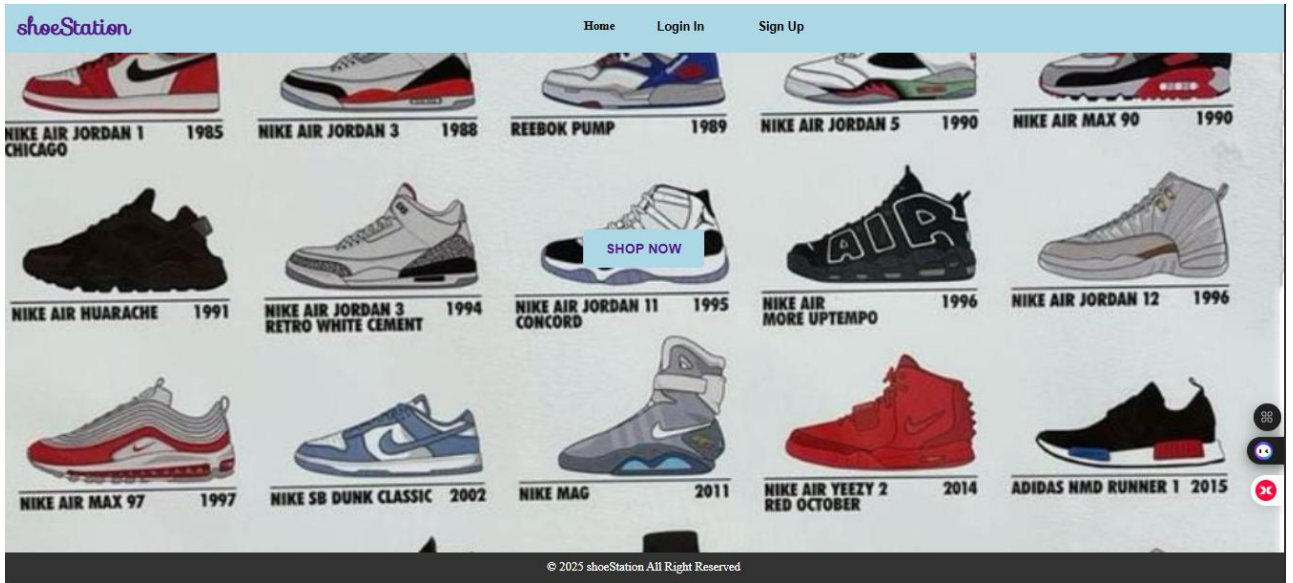

Page	Content Needed	Source
Home	Brand slogan, intro text, animated logo	Created content & online assets
Products	Shoe categories, pricing	Shop inventory / sample items
Order Form	Form fields, instructions	Designed based on project brief
